

(start belt #1)

For those of you unfamiliar with E week it is an annual event on campus it attracts upwards of 15,000 people during its two day open house period. Its purpose to inform, entertain, and educate the citizens of Nebraska concerning recent trends in Engineering. To let the people of the state view the facilities of the college first hand. The unique thing about E week though is that it is entirely planned and administered by the students of the college. We feel that it provides an excellent opportunity for students to learn practical experience in solving engineering problems to encounter and overcome problems of working together towards a common goal and thus make themselves prepared to face the real world and its problems. E week is also self supporting except from out-right donations from interested organizations through the sale of E week pins, to the public. So resourcefulness, ingenuity, and careful budgeting all play a very important part in making E week successful. These factors contribute to give the Engineering student at the University a more rounded education and therefore we feel that we can justify this celebration of Engineer week as a valuable addition to the curriculum. The theme of E week 1972 to be held Thursday April 13 through Saturday April 15, is a "New Look at Engineering". We hope that we can provide just such a look. For instance the students of the college prepared projects and displayed and illustrated in layman's terms the basic principles of engineering thoughts. The displays include topics such as laser technology, pollution problems, transportation for the future, automation and computer systems to name just a few. We also have visiting speakers including a Russian Scientist who will speak on technology and education in the Soviet Union and an Executive from General Motors who will present scholarships to several students while on campus. Continuing with this theme for the first time ever we are including a high school division of E week with some of the more noteworthy science fair projects from the area in the hopes of attracting more bright young people to attend the University. We are inviting all high schools in the state to attend the E week open house displays and orientation sessions. With these preliminary steps therefore, we are laying the ground work for future years which makes the college of engineering and architecture at the University the true center for responsible socially aware education for the citizens of the state. Finally the most contribution to our new look at engineering will be the new engineering complex recently completed on the Lincoln campus. This facility is the finest and most advanced related engineering building related in the state. We are fortunate of E week 1972 will be able to take part in the dedication ceremonies of this complex to be named the Nebraska Engineering Center. The dedication will take place on April 15 at 11:00 a.m. and for this reason we are here today. We are officially invitating the legislative body of the Nebraska Unicameral to attend E week of 1972, and help in the dedication of the Nebraska Engineering Center. As representatives of the people of the state of Nebraska through tax money has funded the construction of this
