

not an attempt...this is not to stump the sponsor or anything like that. I just...that is, to me, the most significant question you can ask, because what's likely to happen is people will go into the managed care plan and that was the complaints we were hearing before is they will go into that plan, they will be treated, they don't "trust the company docs", the doctors will then say, we'll kick you loose, you'll go back to work. The injured worker doesn't feel that he's been healed up sufficiently and, therefore, believes he's entitled to additional compensation and then the real issue is, do I get to go to my own doctor for a second opinion. And I think that's key to it. To me, that is a very significant issue and I'm not...I don't suppose to tell you what the answer is, I don't know, but this is the language, I think you ought to define it somehow so we know because that, to me, is a scenario that's going to happen over, and over, and over again if we don't give them some clarity on that. Senator Landis, again, I yield the rest of my time to you to continue that discussion or try to answer any part of that question that hasn't been answered.

SENATOR HALL: Thank you, Senator Hohenstein, and, Senator Landis, you have approximately two minutes.

SENATOR LANDIS: Thank you, Senator Hall. I, too, want to make sure that we, in fact, pose the question very carefully and answer it very carefully so I'm not going to give you an answer off the top of my head. Let me tell you what I do think a place where denial of compensability would occur.

SENATOR HALL: Senator Landis, could you speak into the microphone so we could pick it up. We're not picking it up, sorry.

SENATOR LANDIS: Is that right? It's not being amplified? Oh, I'm amazed.

SENATOR HALL: Project, Senator Landis, project.

SENATOR LANDIS: Thank you, Senator Hall. Let us imagine that a worker is injured and let's say a couple of pins are put in their back, okay, for an injury, a back injury. All the way through the treatment for the back the pins are there. That line of treatment is now done. Six months later, pains in the back, guy goes in and says, look, I want the pins removed because of this pain in my back. The treating doctor says, no,
